B2BE Fax Gateway

The B2BE Fax Gateway offers B2BE clients a flexible way to transmit documents to trading partners through the B2BE network. The B2BE Fax Gateway can be used in tandem with your e-Commerce initiatives or as a stand-alone application to transmit documents to your trading partners.

Features

The B2BE Fax Gateway is an ideal way to send documents to your trading partners that are unable to integrate documents into their respective business systems.

Data transmitted is fully encrypted through the B2BE Client software (you may also select to use your own communication protocol) to the B2BE servers which is integrated with your business system. B2BE translates and formats the document so the recipient receives the information through their fax machine in an easy to read pre-determined format that reflects your current hard copy documents.

What are the benefits?

- Low implementation and ongoing costs
- Removes the need to purchase and manage expensive faxing software
- Data is sent directly from your business system with no manual intervention
- The B2BE Fax Gateway product can be run in sync with other B2BE products and business process managed services including fully integrated B2BE solutions and print management services
- The output format is highly flexible and can be changed quickly if required

What documents can you send through the B2BE Fax Gateway solution?

The limitation is entirely dependent upon what value you place on the efficiency gains from sending documents via the B2BE Fax Gateway. The following are just a few documents that can be faxed using the B2BE Fax Gateway:

- Advance Shipping Notices
- Delivery Dockets
- Order Confirmation
- Quotations
- Credit Notes
- Invoices
- Purchase Orders
- Statements
