B2BE MYOB Platform Integration

MYOB is an international provider of solutions that empower business owners and accountants in the management of day to day administration, empowering them to achieve business success. MYOB develops and delivers award-winning software, services and support for more than 700,000 businesses and over 10,000 accounting practices worldwide.

To improve how you use MYOB and improve your organisation's processes or simply to respond to your customers B2B or EDI requirements B2BE supply a range of MYOB plug-in tools to facilitate the integration of documents between you and your customers. Integrate your customer's Purchase Orders automatically, send Invoices electronically, improve processing times, accuracy and efficiencies. Or more importantly, respond to your customer's needs to trade electronically!

Utilise your staff's time and energy in other areas of your business to ensure you are maximising returns and focusing on what you need to be doing, managing and growing your business.

B2BE have a range of products and solutions that facilitate a collaborative e-Commerce environment letting your organisation capitalise on a range of new technologies and solutions which can be fully integrated with your MYOB platform. These solutions include:

- B2BE Transaction Delivery Network (B2B TDN or traditional EDI)
- B2BE e-Catalogue applications
- m-Commerce solutions (Sales force automation)
- Business Process Outsourced Solutions (Automated emailing and facsimile solutions for outbound MYOB generated Invoices)

The diagram (above) describes the integrated process flow of documents between you and your trading partners via B2BE and the MYOB B2BE Plug-ins.

B2BE through the B2BE Transaction Delivery Network (B2BE TDN) are able to deliver integrated solution for any of the B2BE products and solutions into or out of your MYOB environment. Whether you are using; MYOB Accounting Plus Version 17 or another version or release, B2BE has the solution.

B2BE MYOB Plug-ins in practice

B2BE provides your organisation with the B2BE software to handle the download and upload from the B2BE server environment in a secure and auditable fashion. B2BE will also handle the liaison with your customers to assist with and setup electronic trading requirements and testing! Simple!

B2BE will also supply the required MYOB plug-ins based on your e-Commerce requirements and MYOB version completing all the setup and testing enabling the automated upload and download of Purchase Orders and Invoices to and from MYOB. So how does it work?

So if we take a scenario where you wish to trade electronically with your customers this is the solution overview:

B2BE will receive your customer's Purchase Orders in any format; UN/EDIFACT, ANSI X12, ASCII or XML. Each file is translated within the B2BE TDN server environment. Through the B2BE MYOB Plug-in within your environment (supplied by B2BE) the Purchase Order will be automatically loaded into MYOB as a Sales Order. B2BE will, at the B2BE TDN server level; enrich data to facilitate account code or part number conversion as well as add any required qualifier information so MYOB understands what to do with the Purchase Order.

Likewise, if you need to send to your customers e-Invoices the B2BEMYOB plug-in will extract the Invoices based on customer, files will be created and transmitted to B2BE and translated and mapped into your customer's required format; UN/EDIFACT, ASCII, ANSI X12 or XML, for example. (Any format in fact!) B2BE also provide to its MYOB users access to the online B2BE Customer Centre. This provides MYOB users the ability to search, retrieve and view any documents sent to or from your organisation, setup automated email alerts and many other useful functions.

Should you wish to enlarge your organisations e-Commerce capabilities you may also wish to look at any of the other solutions B2BE provides which can be integrated into your MYOB environment.

Key features

- **Fully Extend the Value of Your Investment**

B2BE offers a comprehensive range of products and services that can be fully integrated with MYOB solutions to facilitate a secure, collaborative e-Commerce environment.
