## B2BE Print Management

B2BE Print Management solution provides businesses the ability to send outgoing documents electronically to B2BE who then manage the print and post aspect of the document delivery with trading partners who are unable or do not want to receive electronic documents.

Electronic documents are transmitted to B2BE for printing and mailing using your pre-determined electronic format. The printed format is highly flexible and can be customised to include your corporate branding and imagery or personalised messages.

The B2BE Print Management solution can be integrated to run in conjunction with a full B2B e-Commerce environment with your trading partners or as a stand-alone solution. The B2BE Print Management solution is an ideal solution to compliment your existing B2B integrated applications or the B2BE Fax and Email Gateways and B2BE Web Portal.

The B2BE Print Management solution will enable you to deal with many more documents in an automated electronic manner, therefore helping to reduce your organisations document handling costs and freeing up resources to do more productive tasks or roles.

Files are transmitted through to B2BE using any protocol. Documents are formatted and printed in a pre-determined manner in line with your current hard copy documents.

## Features

- **Any Document Type**

The limitation is entirely dependent upon the value of the efficiency gain by sending documents via the B2BE Print Management solution. Simply speaking, B2BE can print any document type.

Typically documents that suite this process are high volume repetitive documents such as your organisations customer Invoices and Statements or supplier Remittance Advices.

- **Online Document Availability**

All documents printed through the B2BE Print Management solution are indexed so they are available online for retrieval and viewing. The interfaces can also be customised using the B2BE Web Portal solution so you can have the same look and feel as your current web presence.

All documents are securely accessed based on user permissions which means you are also able to facilitate others within the supply chain to have access to documents to help reduce queries and document re-sends.

- **Intelligent Document Routing**

As part of the Print Management solution B2BE are also able to provide mechanisms whereby you are able to re-direct documents using more cost effective mechanisms such as EDI (B2B), email and facsimile helping further reduce document distribution costs through efficiency gains.

This can again be managed by your organisation through self fulfilment interfaces within a Web Portal so you can set the document distribution methodology. Again, those trading partners in your supply chain that you trade with you may wish to allow them to select the way in which they receive documents?

Intelligent document routing and self fulfilment interfaces are all designed to move as many of the documents from print and post to more cost effective document distribution methodologies so your organisation can control the ability through B2BE to reduce costs for document handling.

## What are the benefits?

- Enable 100% automated document distribution for a particular document set or type
- Eliminate costly and repetitive document handling processes
- Improve resource allocation into more pro-active areas of the business
- Provide supply chain partners with access to all their relevant documents through a secure Web Portal
- Drive costs down through managed self fulfilment interfaces to move documents from print and post to more cost effective document distribution methodologies.

## What documents can you send through the B2BE Print Management solution?

The B2BE Print Management solution can basically handle any document type. Some of the documents that are useful to outsource include:

- Invoices
- Dunning Letters
- Remittance Advices
- Statements

The B2BE Print Management solution can be combined with other B2BE document outsourcing solutions to enable a single data stream with multiple document distribution methodologies to further reduce document distribution costs.
