B2BE Web Portal

The B2BE Web Portal creates a single point of access that allows partners, employees and customers to effectively share information and work together more efficiently. It is a flexible and user-friendly solution that provides a robust platform that allows different functions and entities to exchange data with one another within a business or from external sources.

The B2BE Web Portal provides businesses a single point of access to processes, applications and information to anyone, anywhere, based on your organisational needs.

The Web Portal solution provided by B2BE is an ideal way of providing visible interfaces to many of the B2BE products and solutions so all data and information is easily accessible in a single location. For example, data transmitted through the B2BE Transaction Delivery Network (EDI) is visible to not only the technical personnel within your organisation but more importantly to the business people who require visibility to perform and excel within their functional responsibilities.

Likewise, to enhance process flow and ensure better integration of EDI data your business may benefit from document workflows which can be accessed through the B2BE Web Portal suite of products. Historical data may also prove to be relevant within a business context so the B2BE Archiving interfaces can be accessed through the B2BE Web Portal.

Fundamentally any of the B2BE products and solutions can be accessed or interfaced through the B2BE Web Portal as a single entry point.

Features

- [Permissions Based Access Levels](#)

The B2BE Web Portal enables your organisation to specify user and access levels so you are able to define user access levels in terms of what each user can see.

This enables you to provide customised access to many users within your supply chain so they can see interfaces and documents based on their specific user permissions and function within the supply chain. Let customers see their Invoices for example or provide suppliers access to see Purchase Orders, Invoices and Remittance Advices.

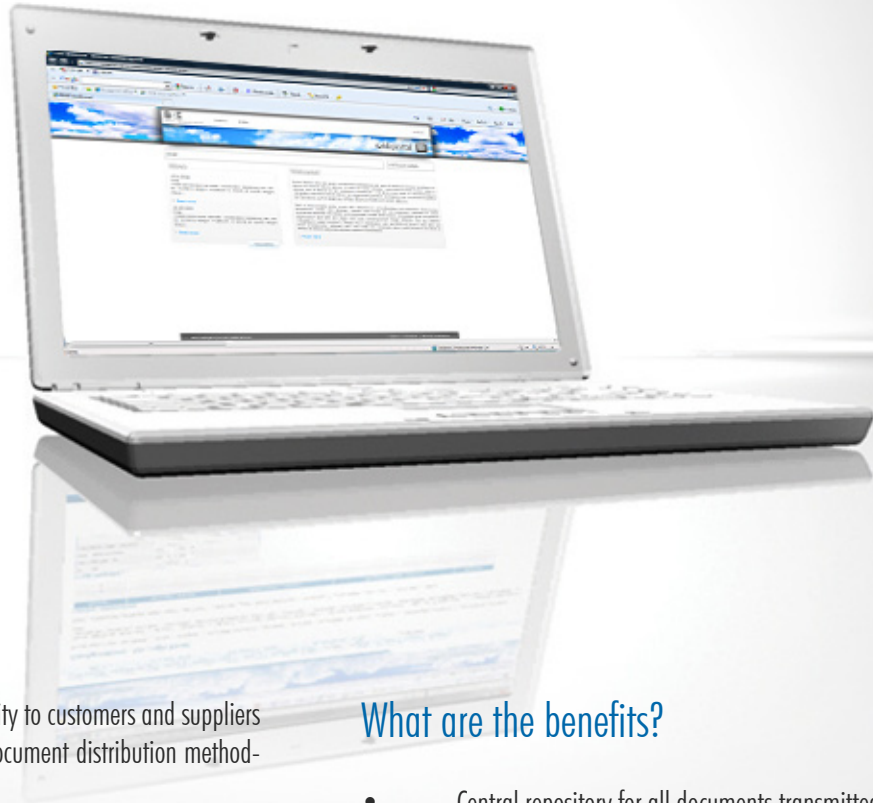

- [Fully Customisable](#)

The B2BE Web Portal is fully customisable to emulate the look and feel and interaction with current web offerings or provide scalability to add new functions or solutions.

The B2BE Web Portal can provide very simply functionality through to more complex interfaces and workflows based on the B2BE solutions you have adopted and ones by which you can improve visibility and process flow to users.

- [Interactive Document Management](#)

Through the B2BE Web Portal your organisation is able to configure document routing preferences to ensure you're able to meet trading partner's requirements and ensure you're distributing documents in the most cost effective way.

You can even provide self service functionality to customers and suppliers so they can view and manage their own document distribution methodologies.

- **Integrates with the B2BE Suite of Products**

The B2BE Web Portal allows you to combine various B2BE solutions and applications to provide a comprehensive resource for document management, handling and distribution.

All of the B2BE solutions can be available through a single interface reducing your organisations need to store and manage documents and information through separate solutions and disparate applications.

- **Management Reporting**

B2BE are able to provide reports to assist with the pro-active monitoring of information and data or to provide health check reporting for documents and information held within the B2BE environment either online or through specifically designed reports.

What are the benefits?

- Central repository for all documents transmitted through B2BE or simply uploaded as part of the B2BE Document Archiving solution removing the need to manage and maintain hard copy document repositories
- Integrated document work flow and management tools designed to improve document management processes, audit and controls
- Full document visibility for trading partners and personnel within your organisation and through self service functionality to help reduce operational costs
- Full document visibility for trading partners and personnel within your organisation and through self service functionality to help reduce operational costs
- Secure and centralised mechanism for reporting
