

DOES YOUR ORGANISATION WANT TO TRADE ELECTRONICALLY WITH YOUR CUSTOMERS OR SUPPLIERS?

PRODUCT OVERVIEW

The B2BE managed EDI network is a secure and reliable communication infrastructure and environment for the transmission of electronic documents and data.

B2BE's EDI product is a managed product that creates a highly efficient automated and integrated environment which is managed by B2BE removing the need to allocate specific resources, hardware or the requirement for software. Your organisation only needs to be able to send and receive data in a format you can handle. The B2BE EDI product handles the translation, mapping, enrichment and validation of the documents and data.

KEY FEATURES

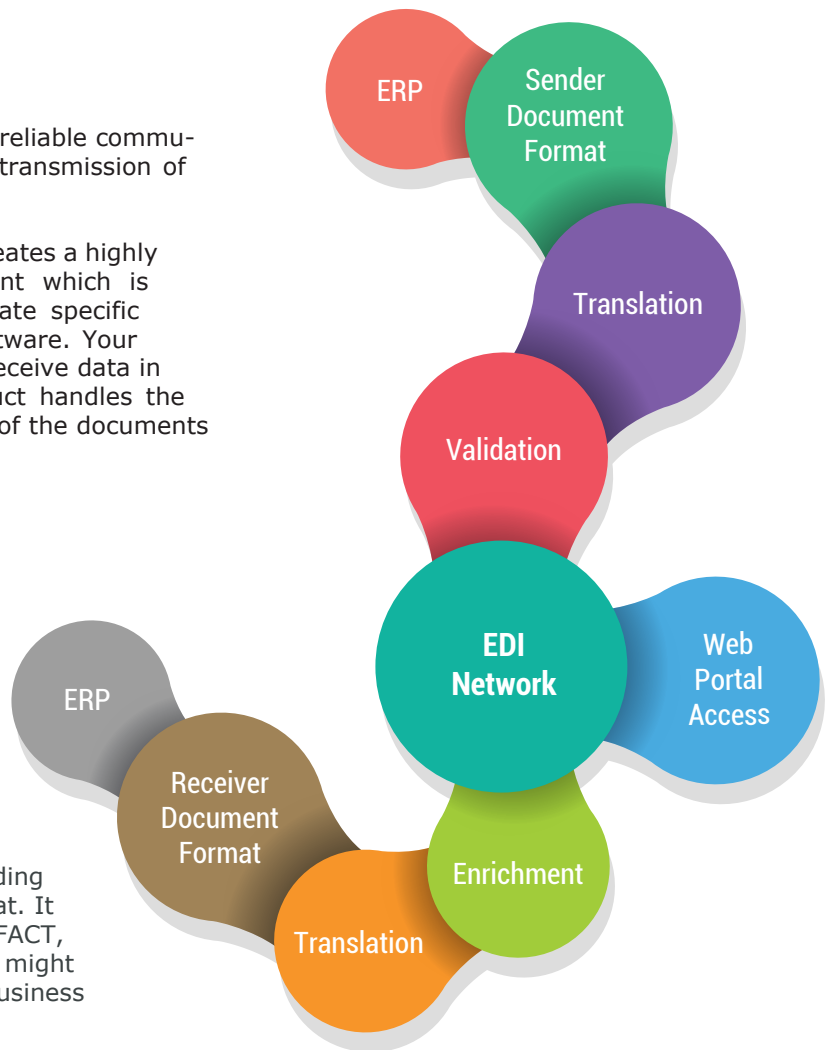

Do you need to respond to customer's EDI requirement to trade electronically? Do you want to embark on an electronic EDI based on-boarding solution to trade with your suppliers? B2BE has all your bases covered with B2BE's EDI product.

Any Document Format

B2BE's EDI product enables you and your trading partner to exchange EDI documents in any format. It can be an industry based standard like UN/EDIFACT, ANSI X12 or cXML or a proprietary format, which might be specific to your trading partner or their business system or their environment.

Any Protocol

B2BE can handle any transmission protocol including SMTP (email), (S)FTP, HTTP(S), AS2, MQ, Web Services and others. B2BE sends and receives electronic documents and data securely over the internet from your network via the B2BE EDI network to a trading partner's environment or into a trading partners EDI provider's network based on your and their requirements.

EDI

Document Validation And Workflow

As documents are parsed through B2BE's EDI network B2BE can automatically validate your trading partner's document content based on a set of defined business rules or for tax requirements. Only after validation and translation is it sent to your business system.

Document validation is ideal, for example when your organisation is receiving invoices from suppliers and need to ensure they have complied with your business requirements and regional taxation laws. Likewise, sales orders can be validated before they are received into your system to ensure they will not create exceptions and slow delivery turnaround times.

Data Enrichment Ensures Integration

If your trading partner can't send all the data needed for complete integration, the B2BE EDI environment can automatically enrich or transpose the data in the document.

Document Visibility And Audit

The B2BE EDI environment is supplied with access to the online Customer Centre which has full document visibility, with tracking functions and audit trails.

This useful tool is a single point of information for all relevant documents that have transmitted through the B2BE EDI environment and can be configured for your organisations employees to access.

Alerts And Reporting

B2BE's automated notifications can let your organisation know when an important event occurs (or doesn't) so you can deal with them quickly and efficiently. For example, your customer services team could set an alert if a trading partner does not send a purchase order in a set time frame.

CONTACT

For more information on the B2BE product EDI or for other products and solutions, please visit us at www.b2be.com

Monitoring And Service

B2BE's systems teams monitor the network 24 x 7 so you don't need to worry about it. Likewise, B2BE's support personnel can be contacted for any queries if they arise.

KEY BENEFITS

Automate

Optimise and automate business processes from paper to electronic and drive cost savings through the removal of manual processes.

Connectivity

Interoperability to other networks when required and B2BE's EDI product is the backbone to the B2BE suite of e-commerce and document management products and solutions.

Environment

Reduce environmental impact through the reduction of paper based documents.

Responsiveness

Increase responsiveness and customer service levels and better meet customer demands and requirements or supplier engagement initiatives.
