

# PUNCH OUT

## DO YOU WANT TO PUNCH OUT TO YOUR SUPPLIER'S CATALOGUE OR ENABLE PUNCH OUT FOR CLIENTS?

B2BE's punch out functionality supports OBI and OCI based standards so you can go to supplier's catalogues, browse, select goods and integrate the reverse purchase order into your ERP system. Likewise, if you have clients that want to do the same with your catalogue B2BE can support your organisation in either scenario.

### SOLUTION OVERVIEW

The B2BE punch out solution enables your organisation to deliver the solution in two ways, depending on which side of the supply chain you wish to support and automate.

On your supply side, the punch out solution enables you to punch out to supplier catalogues so you can browse and order products externally from your inventory master environment. The solution enables the reverse purchase order process and through the B2BE EDI product this can be integrated with your procurement system so a purchase order can be created and sent electronically to the supplier.

On the buy side of your supply chain the B2BE e-catalogue can support punch out so if you have customers who want to be able to access your catalogue, browse and select goods this can be supported with a corresponding reverse purchase order being sent to the buyer.

B2BE have you covered on either side of your supply chain if you want to utilise, develop or support punch out capabilities.
