Objective, Scope & Definition

Objective

Being sustainable means understanding the impact our business and our client's business has on the world around us, and the impact the world around us has on our business.

We use this understanding to inform our purpose, strategy, and the decisions we make. It is a vital part of what drives the Group's business today as a global business-to-business e-solution provider, and how we view our organisation and our client's organisations for tomorrow.

Scope

This Statement covers the Group's operations globally, and is applicable to all staff, supplier, third party contractor, business partners, and governments within liaison of the Group.

Definition

Abbreviation

The Group

↳ B2BE Group of Companies

Principles

The Group will always look at information available to us to drive sustainability and what that means to the Group and to our customers. We make a range of solutions based on these judgements and changes.

The Group fully acknowledged that it is our obligation and responsibility to respect and preserve the delicate balance of nature and the ecology of the planet, the growth of our people, and our contribution back to the society.

Our Approach

The Group as a leading business-to-business e-solution service provider globally, understands what we deliver, and the more we can deliver our solutions, the greater levels of sustainability can be achieved.

We take our products and solutions very seriously in the way they impact an organisation's sustainability, and we like to share our philosophical viewpoint with our clients.

We encourage our employees, suppliers, and customers to contribute ideas in the way we operate or what we can do to help them become and maintain sustainability.

We will continue to evolve our products and solutions, not only to make B2BE more efficient, to further help the global fight for sustainability.

Community

The Group strives to contribute to the surrounding communities particularly in the education sector through constant engagement with universities via career talks, fairs, and internship and training opportunities.

Energy and Carbon Emissions

Our current and future products and services are developed with the intention to help reduce and eliminate the use of natural resources.

With each new client the Group engages with, we are able to reduce their carbon footprint through innovations and technologies. Our products and solutions eliminate the use of paper through automation, and our work processes operates on the digital environment minimising the reliance of paper.

The Group actively promotes recycling, manages, and monitors waste to minimise our effluent. The Group has migrated onto the digital work environment for the majority of our operations and maintains the minimum use of paper where required by legislation and law.

We are fully committed to help our trading partners, customers, and suppliers to transition to their paperless environment through our products and solutions, which in turn reduces the consumption of natural resources. The Group actively encourages our employees to take lead in understanding sustainability and the role everyone has in it.

Environment

The Group emphasis on the application of innovative e-solutions to facilitate effective process improvement and the best practices that are environmentally friendly, optimising the use of resources and promote energy efficiency and to take proactive measures to preserve the environment for future generations.

System Efficiency

The Group strives to achieve the highest efficiency in IT resources by providing daily support services to ensure the systems run smoothly and are risk-protected. The Group also ensures that the connectivity with our business partners through emails or web-based communications are always maintained and risk-protected.

Supply Chain Management

The Group's position in the IT industry does not incur much raw material usage. However, where necessary, the Group strives to ensure that we source or use as much of our resources from the local region to empower and boost the surrounding economy.

Transparency and Government

The Group will comply with relevant business rules, regulation, and guidelines, to undertake sustainable and responsible business practices through integrity and good ethics.

Workplace

A happy workforce is a productive workforce. We realise that our successes are the result of our peoples' collective energy and efforts at the workplace. We continuously strive to bring the out the best of our peoples through technology, systems, solutions, and operating procedures. The Group will strive to continuously review, improve, and implement practices that are environmentally sustainable.
