

First Steps

EDI and Connectivity

When you decide you want to adopt an EDI approach you will also need to consider how the files get in and out of your network

- 01 Do you currently trade electronically and how is connectivity setup between you and your provider or customers/suppliers?
- 02 Where your organisation supports EDI do you need to support multiple connections and connectivity mechanisms?
- 03 Are you being asked by your customers and suppliers to manage different connectivity to support them?
- 04 How secure is the current connection(s)? Or do you have security teams who are looking to decrease current network access?
- 05 If you need to support more secure connections, AS2, HTTPs etc. over less secure connections, FTP, SMTP etc. does your organisation have the infrastructure and teams to manage this?
- 06 Are you looking at direct integration with your ERP via API's?

Get in touch with B2BE and we can help you answer the questions in the steps and guide you through connectivity options whether you're new to EDI or looking to change provider or the protocol you're currently using.

About B2BE

B2BE delivers electronic supply chain solutions globally allowing organisations to better manage their supply chain processes, providing greater levels of visibility, auditability and control. With over 20+ years of experience, the B2BE teams operate in over 20 countries and regions and speak 17 different languages. We are trusted by over 6000+ customers with more than +58,000 trading relationships.
